A Complete, Streamlined Construction ERP Solution for General Contractors

Construction projects are a sea of moving parts. Today's construction business environment demands that organizations navigate projects with an elevated level of complexity.

General contractors traditionally struggle with integration across all departments with disparate systems that create siloed data and error-prone double entry. As a general contractor, your ability to complete projects on time and within budget depends entirely on the level of collaboration between your central office and your field staff.

Whether you self-perform or manage sub-contractors, you need access to accurate, timely project data to make the strategic decisions that move projects—and your business—forward. Unfortunately, running a business with disconnected project teams results in delayed project updates and unnecessary costs.

With Acumatica's true cloud construction software, you can easily manage your customers, finances—including job cost accounting—field and service teams in one cohesive solution. Acumatica Construction Edition comes equipped with full CRM functionality for clear customer communication. The role-based dashboards with AI and machine learning provide the right people with the right information to collaborate and look to the future. The Acumatica mobile app supplies centralized access to critical reports, compliance documents, and project progress updates. Users save money with Acumatica's unique usage-based pricing, which allows them to lower infrastructure costs and scale up and down for changing business needs. The bottom line is increased visibility, team collaboration, and profitability on every project.

"Acumatica's job costing abilities and controls, along with the ability to provide flexibility of modules as we grew, were huge selling aspects for us."

—Jay Feinman, CFO, Tester Construction Group

> CUSTOMER STORIES

Financial Management

Robust financials are simple enough for smaller contractors yet scalable for more complex needs. Acumatica Financial Management has standard financial processes (GL/AP/AR) and reports. Multi-company, multicurrency, intercompany accounting, fixed assets, recurring and deferred revenue, and cash management are also available.

Job Cost Accounting

Manage AP workflows, from entering an invoice through approval routing and checks. Seamless customer billing, driven by real-time project costing, includes up-to-date labor, material, equipment, and other costs. Code transactions to a single project, multiple projects or a combination all in a single document.

Project Management

Gain a complete view of project details—including real-time field updates—providing instantaneous information between your project management team, back-office workforce, and management. Easily manage and track all activities, issues, and changes, including daily field reports, actual costs, and cost projections from one central area.

Cost Projections

Reporting enables users to create detailed cost projections, analyze project margins, and review over or under-billing for specific dates. The system streamlines this process by automatically adjusting budget levels based on project settings with flexibility to customize the projections' detail levels.

Payroll

Flexible payroll solution supports multiple unions, locals, classes, benefits packages, complex wages, certified wages, executive compensation, and commission structures.

Commitments

Automatically calculate budgeted quantity against projected costs. Create and track subcontract status, purchase orders, budget comparisons, line-item committed costs, and payments.

Compliance

Effectively manage lien waivers and releases, insurance certificates, and status updates, providing expirations and other alerts to staff and suppliers. Automatically create compliance documents.

Progress Billing

Flexible progress billing by percentage of completion or by quantity reduces project owner risk. Use automated, flexible selection criteria to produce the cost details and supporting documentation. Easily associate cost transactions to progress billing lines for substantiated billing. Include T&M lines of pro forma invoices in AIA reports and progress billing lines to decrease days in AR and increase billing volume.

Customer Relationship Management

Easily see real-time data on all customer activities, including quotes, orders, invoices, payments, support cases, and service calls. Manage the lifecycle from lead to quote to awarded project. The self-service portal lets customers access account information.

Mobile App

View critical reports on phones and tablets and give field teams and subcontractors tools to enter employee time and equipment details. Access the complete system over any device and search for all project details from one global search box.

Project Productivity and Insights

Use side panels to view key project data quickly and comprehensively without leaving the current window. Generate custom reports and dashboards for data visibility and analysis.

Advanced Material Management

Streamline the management of project materials, including receipts and process returns for purchased materials. Create purchase orders to ship materials directly to project locations, creating an efficient workflow for job site deliveries. Track materials by project quantity, cost, or both. Transfer leftover inventory to free stock using mass processing and automated transactions.

Change Management

Control cost overruns by automating project commitments and change order processes. Manage back charges or reduction in vendor commitments through the entry of a negative change order. Drop-ship workflows connected to change orders for improved business workflows. Streamline change orders for multiple construction projects with unit rate changes, custom retainage, and cost-only change requests.

Field Reports

Ensure everyone has the same information, from subcontractor updates, job site visitors, issue and change tracking, photo logs, and job site weather reports. Collaborate with project managers from the field with mobile entry of units installed or used during project tasks for improved planning, progress tracking, scheduling, and billing.

CFMA Benchmarker

Streamline collaboration with the CFMA by submitting preconfigured Acumatica construction financial data for inclusion in the CFMA Benchmarker survey. Benchmark your results directly against CFMA member peers with a custom dashboard with corporate return on assets, return on equity, and other financial ratios from CFMA members within your region.

Project Cost and Revenue Tax Zones

Simplify tax calculations for a project – tax zones are specified directly in the project and automatically retrieved and calculated for all invoices, purchase orders, subcontracts, and expenses.

ABOUT ACUMATICA

Acumatica Cloud ERP is a comprehensive business management solution that was born in the cloud and built for more connected, collaborative ways of working. Designed explicitly to enable small and mid-market companies to thrive in today's digital economy, Acumatica's flexible solution, customer-friendly business practices, and industry-specific functionality help growing businesses adapt to fast-moving markets and take control of their future.
